Dental insurance plans cover preventative maintenance at 100%. The whole family gets an examination and has their teeth cleaned with no out of pocket expense. When a filling or crown (usually covered at 80%) is needed, you have the peace of mind knowing you will be able to afford it.

Dental Insurance for Healthy Smiles

While you may enjoy good dental health right now, at some point we all need a dentist. Whether a sudden toothache puts you in intense pain, or accidentally biting into something hard and breaking a tooth, having dental insurance means you are prepared. As we age, most of us will have problems with our teeth and gums. Keeping up with routine preventative care allows us to know about problems before they become severe.

Early detection can mean the difference between minor dental work, such as a filling, and losing the entire tooth. The cost of dental work is extremely expensive. A crown alone can cost over \$500, and that doesn't include the exam and x-ray. Simply paying a small premium each month can help to guarantee that you can afford a long lasting, healthy smile.
